CELEBRITY SPOTTED OUTFITS

The Editor’s Guide

How to add celebrities, looks, garments, products and articles to the archive. Written for someone who has never opened this system before. Read section 3 first; it is the job in one page. Everything after that is detail you can look up when you need it.

CONTENTS

What is in here

Fourteen sections. The first four get you publishing; the rest you can read once and return to.

01 How the archive is built — The five things, and how they connect

02 Getting in — The admin, and how it is laid out

03 Publishing a look, start to finish — The whole job in nine steps

04 Adding a celebrity — Every field, and the two images

05 Adding a look — Every field, and what the story is for

06 Identifying garments — The confidence call: the heart of the site

07 Products and buy links — Prices, merchants, and the /go rule

08 Images and licensing — The one thing that can cost real money

09 Writing an article — Templates, blocks, keyword links

10 The request queue — Answering readers who ask us to find something

11 Brands — The directory, and affiliate settings

12 Homepage, navigation, footer — The parts you can rearrange

13 Publishing, drafts and URLs — Draft, schedule, and never break a link

14 House rules and gotchas — What not to do, and why

SECTION 01

How the archive is built

Everything on the public site is assembled from five kinds of record. Understand how they hang together and the rest of this guide is obvious.

A **Celebrity** is a person we cover. A **Look** is one outfit they wore on one occasion, and it gets its own page and its own web address. An **Item** is a single garment inside that look: the jacket, the shoes, the brooch. A **Product** is a thing a reader can actually buy, which an item points at. **Brands** sit alongside as a directory, and **Articles** are the journal: longer writing that is not tied to one outfit.

The reason a look gets its own page rather than being a section of the celebrity page is search: people search for *an outfit*, not only for a person. A page with a title, a photograph and forty words gives search engines nothing to index, which is why the story field in section 05 matters more than it looks.

Where each one shows up

RECORD	PUBLIC ADDRESS	ALSO APPEARS
Celebrity	`/celebrities/name`	Celebrity index, homepage grid
Look	`/celebrities/name/look`	The celebrity’s page, homepage latest looks
Item	No page of its own	Listed on the look page it belongs to
Product	No page of its own	Buy links on look pages and inside articles
Brand	`/brands/name`	Brand index
Article	`/journal/title`	Journal index, homepage preview

> WORTH KNOWING EARLY
>
> Items are not created inside a look. You create them separately and point each one at its look. This trips up everybody once. Section 06 explains why it is built that way and how to do it.

SECTION 02

Getting in

The editing system is called Payload. You reach it in a browser and it looks like a database with good manners.

The address

Add `/admin` to the end of the site address. You will be asked for the email and password you were given. If you do not have one, ask for an account to be created; you cannot sign yourself up.

How the left-hand menu is grouped

GROUP	CONTAINS	WHAT IT IS FOR
Archive	Celebrities, Looks, Items, Products, Brands	The main body of work. You will live here.
Journal	Articles	Longer writing
Library	Media	Every image on the site
Requests	Requests, Request uploads	Readers asking us to identify something
Reporting	Outbound clicks	Which buy links get clicked
Settings	Site settings, Navigation, Footer, Homepage, Redirects	Site-wide controls. Change with care.

Two habits that will save you

- **Your work saves itself.** Drafts autosave every few tenths of a second. You will not lose anything by navigating away.
- **Saving is not publishing.** A record stays a draft until you publish it. Nothing you type appears on the public site until then. See section 13.

SECTION 03

Publishing a look, start to finish

This is the job. If you read one section, read this one. The detail behind each step is in the sections that follow.

---

01 **Check the celebrity already exists**

Open **Archive → Celebrities** and search. If they are not there, create them first (section 04). A look cannot be saved without a celebrity attached.

02 **Get the photograph, and get it licensed**

Before anything else. An unlicensed photograph is the one mistake on this site that costs real money. Section 08 sets out which sources are allowed.

03 **Upload the photograph to the Library**

Library → Media → Create. Fill in the description, the credit and the licence. The system will not let you save without all three. Set the focal point so the crop keeps the face in frame.

04 **Create the look**

Archive → Looks → Create. Choose the celebrity, give it a title, set the date, place and occasion, and attach the photograph. Full field list in section 05.

05 **Write the story**

A few hundred words on where it was worn, what the outfit is doing, and why it works. This is what makes the page worth its own address.

06 **Save it as a draft**

You need the look to exist before you can attach garments to it.

07 **Add the garments, one at a time**

Archive → Items → Create, once per garment, each pointing at this look. For every one you must choose a confidence level. That decision is section 06, and it is the most important judgement you will make here.

08 **Attach products where a reader can buy something**

Search the existing Products first; most arrive automatically from merchant feeds. Only create one by hand if it genuinely is not there. Section 07.

09 **Read it back, then publish**

Check every confidence label is one you would defend to the brand’s lawyer. Then publish the look. The public pages update within seconds.

THE STANDARD TO HOLD

A reader should never be told something is confirmed when it is a guess. The site’s whole value is that its labels are honest. An open “we could not confirm this” costs us nothing; one invented brand costs us the reason anybody trusts the archive.

SECTION 04

Adding a celebrity

Archive → Celebrities → Create. Short record, two images, one piece of real writing.

FIELD		WHAT TO PUT IN IT
`Name`	Required	As they are normally credited. “Michael B. Jordan”, not “Jordan, Michael B.”
`Slug`	Required	The web address. Fills in automatically from the name. Leave it alone unless you have a reason, and read section 13 before changing one that is already live.
`Category`	Required	Film & TV, Music, Sport, or Creator. Pick what they are best known for.
`Standfirst`		One paragraph. Not a biography: a thesis. What is distinctive about how this person dresses? This is the hardest sentence on the record and the most read.
`Bio`		Longer background. Optional, and it can wait.
`Portrait image`		Upright, taller than wide (3:4). Used on cards and lists.
`Hero image`		Wide. Used for the full-width band at the top of their page.
`Featured`		Pins them above everything else on the index.
`Rank`		Lower numbers come first among featured people. Ignore it unless you are ordering the front page.

> WHY TWO IMAGES
>
> A tall portrait cropped into a wide band loses the head; a wide shot squeezed into a card becomes a sliver of shoulder. They are different pictures for different shapes, not the same picture twice. If you only have one, upload it as the portrait and leave the hero empty.

A good standfirst, and a bad one

Weak: “An English actor known for the Spider-Man films and a number of stage roles.”

Strong: “Dresses like someone who knows exactly how much of the reference to leave in. The Spider-Man tours are the clearest case: the colours are always there, the logo never is.”

SECTION 05

Adding a look

Archive → Looks → Create. One outfit, on one occasion. This is the page the reader lands on from search, so it carries the most weight.

FIELD		WHAT TO PUT IN IT
`Celebrity`	Required	Who is wearing it. Must exist already.
`Title`	Required	Describe the outfit, do not name the event. “Crimson Jacquemus, and a navy tie” beats “Spider-Man premiere”. The event has its own field.
`Slug`	Required	Auto-filled from the title.
`Date`	Required	When it was worn, not when you are writing.
`Location`		City, or the venue if it is famous. “London”, “Leicester Square”.
`Occasion`		Airport, Premiere, Press call, On set, Street, or Event.
`Event`		The specific occasion. “Spider-Man: Brand New Day UK premiere · Odeon Luxe Leicester Square”. Leave empty rather than guess.
`Description`		One or two sentences on what is being worn. Used on cards and as the search-result snippet, so keep it short and concrete.
`Story`		The long form. See below.
`Photos`		One or more. **The first one is the lead image.** Drag to reorder.
`Items`		Read-only list. It fills in as you create items pointing at this look.
`Featured / Rank`		Pinning and ordering, as with celebrities.

What the story is for

Aim for three or four short sections with headings. A shape that works every time:

- **The setting.** Where, when, what the occasion was.
- **The outfit.** What the pieces are, in order, in plain words.
- **Why it works.** The actual argument. This is the part readers come back for.
- **What you can actually buy.** Honest about what is bespoke, couture, or long gone.

You can drop a buy module directly into the writing, so a product sits next to the sentence about it rather than only in the list underneath. Use the block menu in the editor.

HOUSE STYLE

No em dashes anywhere in reader-facing writing. Use a colon for a gloss, a full stop for a separate thought, brackets for an aside, a comma for a trailing qualifier. This is enforced across the site and it is the fastest way to spot copy that was not written by a person.

SECTION 06

Identifying garments

Archive → Items → Create, once per garment. Every item carries a confidence level, and that label is the most important thing you will type here.

Why items are created separately

You do not add garments inside the look. You create each one in the Items collection and point it at the look using the **Look** field in the sidebar. It is built that way so the whole archive can be reviewed at once: “show me every unidentified jacket” is a question worth being able to answer, and it is impossible if items are buried inside individual outfits.

The fields

FIELD		WHAT TO PUT IN IT
`Description`		The garment in words a reader recognises. “Plain white crew-neck tee”, not “knitwear”. Without it the page can only show a category the reader can already see.
`Look`	Required	Which outfit this belongs to. In the sidebar.
`Category`	Required	Outerwear, knitwear, shirting, tailoring, denim, trousers, footwear, eyewear, watch, bag, jewellery, other.
`Confidence`	Required	See the table below. Never mark something confirmed to fill a gap.
`Evidence note`		Why you made this call. “Logo visible on temple.” Never shown publicly, but it is the audit trail if a brand queries it. Always fill it in.
`Product`		The main thing we link to.
`Alternative product`		A cheaper stand-in, shown when the original is over $500 or out of stock.
`More options`		Further ways to buy the same garment. Cheapest first.
`Position`		Display order within the look. Top of the body downwards is a sensible default.

The four confidence levels

LEVEL	USE IT WHEN	EXAMPLE
Confirmed Logo, hardware or stylist-credited	You can point at proof: a visible logo, distinctive hardware, or a credit from the stylist or brand.	The style name matches a current listing and the brand posted the look themselves.
Closest match Unbranded in the photo	You are confident about the house but cannot read a label, or the piece is custom and built off a known collection.	Reported as custom Jacquemus off a named collection, but not read off a label.
Get the look Cheaper equivalent	You are openly offering something similar rather than the real thing.	A high-street coat in the same cut as an unbuyable bespoke one.
Open Not enough detail to call	You genuinely cannot tell. This is a perfectly good answer.	A plain white shirt with no visible detail.

THE ONE RULE THAT MATTERS

If you are choosing between two levels, choose the lower one. Marking something confirmed because the page looks better with a brand name on it is the only way to genuinely damage this site. Readers forgive “we could not tell”. They do not come back after being sold the wrong coat.

KNOWN GAP

There is no “dress” or “gown” category yet, so evening wear currently goes under **other**. Flag it if this starts getting in your way; it is a small change.

SECTION 07

Products and buy links

Archive → Products. Most of these arrive automatically from merchant feeds, along with their photography. Search before you create.

FIELD		WHAT TO PUT IN IT
Name	Required	As the merchant lists it, but say the colour out loud if it differs from the worn piece. “La Veste Cabri blazer in navy” tells the reader before they click that it is not the crimson one.
Brand		Links to the brand directory.
Description		One line. Cut, colour, material: what distinguishes it.
Price		**In minor units.** $171.00 is entered as `17100`. This catches everyone once.
Currency		USD, CAD, GBP or EUR.
Affiliate URL	Required	The tracked merchant link.
Merchant		Where it is bought. “Nordstrom”, “Farfetch”.
Image / Image URL		Uploaded image, or the address of the merchant’s own photograph.
SKU		The merchant’s code. This is what feed updates match on, so do not edit it.
In stock		Kept up to date automatically for feed products.

> NEVER PASTE A RAW AFFILIATE LINK INTO WRITING
>
> Buy links must always go through a product record. The public site turns them into a tracked redirect of its own, which is how we get click data the same day and how a merchant can be swapped without editing a single article. A raw affiliate link pasted into a story bypasses all of that and silently stops earning if the merchant changes.

Honesty about price and availability

If the exact piece is unbuyable, say so in the writing and link the nearest honest thing, with the difference in the product name. Do not attach a lookalike as though it were the original. Several resellers list “as worn by” garments that turn out to be a different outfit relabelled; check that what you are linking is actually the piece in the photograph.

SECTION 08

Images and licensing

This is the single largest legal risk to the business, so the system refuses to save an image without a credit and a licence. That is deliberate. Do not look for a way around it.

Every image needs three things

FIELD		WHAT TO PUT IN IT
`Alt text`	Required	Describe the picture for someone who cannot see it, and for search. “Tom Holland at the UK premiere in a burgundy double-breasted suit with a jewelled brooch.”
`Caption`		Optional line shown under the image.
`Credit`	Required	Photographer or agency, worded exactly as the licence demands. “Amy Sussman / Getty Images”.
`Licence`	Required	Which of the five routes below.
`Source agency`		Appears when the licence is an agency one. Which agency it is with.
`Licence expires`		Leave empty if it does not expire. Fill it in if it does, or we will still be publishing it after the right has lapsed.

The five permitted routes

LICENCE	WHAT IT MEANS
Agency licence	We pay an agency such as Getty. Record which one.
Official embed	The celebrity’s or brand’s own Instagram or X post, embedded the official way. Free, and permitted by those platforms’ terms.
Creative Commons	Freely licensed, usually from Wikimedia. Credit exactly as the licence requires.
Our own	We shot or commissioned it.
Brand promotional asset	Supplied by a brand’s press office for editorial coverage.
Merchant product feed	Product photography that came with an affiliate feed.

A CREDIT IS NOT A LICENCE

Adding “courtesy of” to a photograph you found online does not give you the right to publish it. Red carpet photographs belong to agencies, and finding a copy somewhere it has been reposted does not change that. If you cannot honestly pick one of the six routes above, you do not have the picture. Publish the look without an image, or do not publish it yet.

Focal point

Each image is automatically cut into eight different shapes for different parts of the site. On a full-length shot, the automatic centre crop will cut the head off in the wide banner. Drag the focal point onto the face and every crop follows it. Takes three seconds and it is the difference between a professional page and a broken one.

SECTION 09

Writing an article

Journal → Articles → Create. Longer writing that is not tied to a single outfit.

Pick a template first

The template shapes how the piece is presented and what search engines are told about it. Choose it before you write, not after.

TEMPLATE	USE FOR
How-to / tutorial	“How to wear a fishtail parka”
Listicle	“Eight premiere suits worth stealing”
Comparison	“Bespoke vs made to measure”
Review	A single product or service, assessed
News / update	Something that just happened
Generic article	Anything that does not fit the others

The fields

FIELD		WHAT TO PUT IN IT
`Title`	Required	The headline.
`Excerpt`	Required	The card summary and the search snippet. Write it as a promise the piece keeps.
`Hero image`		Licensed, as always.
`Body`		The writing, with blocks. See below.
`Published at`		The date shown to readers.
`Author`		Byline.
`Related celebrity / brand`		Cross-links the piece into the archive.

Blocks you can drop into the body

- **Shoppable product** — a buy module inline, with a small label above it.

- **Pull quote** — a line lifted out, with optional attribution.
- **Image** — at text width, wider than the text, or full bleed.
- **Gallery** — several images together.
- **Embed** — Instagram, YouTube, or X. This is also the licensed way to show a celebrity's own photograph.
- **Callout** — a note, or a "get the look" box.

Keyword links

In the SEO tab you can list keywords with the address each should link to. Set the relationship for each one: leave it on **Auto** unless you know better. Use **Sponsored** for anything paid or affiliate, and **Nofollow** for links you do not want to vouch for. Getting this wrong is a search penalty, not a style question.

The same tab shows live checks on the piece as you write. Work down them until they are clear.

SECTION 10

The request queue

Requests → Requests. Readers send us outfits to identify through the “Find my outfit” page. Each one is a person waiting for an answer.

Working a request

01 **Open the oldest new request**

They are worked in the order they arrive. There is no queue to jump, and we say so publicly.

02 **Set it to Researching**

So nobody else picks up the same one.

03 **Do the work**

Reverse image search, runway and lookbook archives, stylist credits, the brand’s own catalogue.

04 **Publish the answer as a look or an article**

Then link it back using the resulting look or resulting article field, so the queue records where the answer went.

05 **Set the outcome and email the reader**

Answered, or could not identify. Both are real outcomes. Record the date you told them.

The five statuses

STATUS	MEANS
New	Nobody has looked at it.
Researching	Being worked on now.
Answered	Identified and published, reader told.
Could not identify	Genuinely unidentifiable. Tell them plainly. This is not a failure.
Declined / spam	Not a real request.

READER PHOTOGRAPHS ARE PRIVATE

Images sent in through the form are held separately from the main library and are not public. We look at them to do the research. Never move one into the Library or publish it, whatever it shows, unless we have licensed that image ourselves. We promise this on the form, in writing.

SECTION 11

Brands

Archive → Brands. The directory. Each brand gets a page, which is also how we rank for the brand's own name.

FIELD		WHAT TO PUT IN IT
`Name`	Required	The house name.
`Logo`		Only if it is freely licensed. A plain wordmark usually is; a pictorial mark usually is not. If in doubt, leave it empty rather than borrow a file we have no right to.
`Website`		Their own site.
`Founded`		Free text. "1937", "1980s".
`Description`		Shown on the brand page. Worth writing properly.
`Affiliate network`		In the collapsible section. Which network we earn through.
`Commission rate`		A percentage. Informational, used to decide which brands are worth chasing. It must never influence what we identify or how we label it.

SECTION 12

Homepage, navigation, footer

Under **Settings**. These affect every page on the site, so change one thing at a time and look at the result.

Homepage

Built from sections you can switch on and off and reorder: **hero**, **latest looks**, **celebrity grid**, **standards**, and **journal preview**. Each has its own heading and settings, and each can be disabled without deleting it.

Site settings

Site name, tagline, default description, logo, and the default sharing image. It also holds two pieces of legally required text:

- **Affiliate disclosure** — appears on every page carrying a buy link. Required by law. Do not remove it or water it down.
- **Non-affiliation notice** — states that we are not endorsed by the celebrities or brands we cover. Also do not remove it.

Navigation and footer

Lists of links with a label and an address each; the footer is grouped into columns. If you add a link to a page that does not exist, it will 404 for every visitor, so paste addresses rather than typing them.

SECTION 13

Publishing, drafts and URLs

How work goes live, and the one action that can quietly cost the site traffic.

Draft and published

- Everything starts as a **draft** and is invisible to the public.
- Drafts **autosave continuously**. You will not lose work.
- **Publish** makes it live. The public pages refresh within seconds.
- You can **schedule** a publish for a future date, which is how you have a premiere look go live the moment an embargo lifts.
- The last **20 versions** of each record are kept, so you can compare and roll back.

Featured and rank

Featured pins a record above everything else. **Rank** orders the pinned ones, lower numbers first. If everything is featured, nothing is.

> CHANGING A SLUG ON A LIVE PAGE
>
> The slug is the web address. It fills in from the title automatically, but only while it is empty, so renaming a title never silently moves a published page. If you deliberately change a slug that is already live, every existing link to it and every search ranking it holds will break.
>
> If you must: change it, then immediately add a redirect under **Settings → Redirects** pointing the old address at the new one. Do not do one without the other.

SECTION 14

House rules and gotchas

The short list. Most of these are mistakes that are easy to make once and awkward to undo.

Never

- Mark an item **confirmed** without evidence you could point at.
- Publish a photograph that does not fit one of the licence routes in section 08.
- Publish a reader's submitted photograph.
- Paste a raw affiliate link into writing instead of using a product record.
- Remove the affiliate disclosure or the non-affiliation notice.
- Change a live slug without adding a redirect.
- Let a commission rate influence what we identify or how we label it.

Always

- Fill in the evidence note, even when the answer is obvious. It is the audit trail.
- Set the focal point on any photograph with a face in it.
- Say the colour out loud in a product name when it differs from the piece worn.
- Check whether a product already exists before creating one.
- Choose the lower confidence level when you are torn between two.

Things that catch everyone once

YOU EXPECT	WHAT ACTUALLY HAPPENS
To add garments inside the look	Items are created separately and pointed at the look.
To type a price as 171.00	Prices are in minor units. $171.00 is `17100`.
Saving to publish it	Saving keeps it a draft. Publishing is a separate button.
Renaming the title to change the address	The slug stays put once set. Change it deliberately, with a redirect.
To find a "dress" category	Not there yet. Gowns go under **other**.
To credit a photo as "courtesy of"	Not a licence. See section 08.

IF YOU ARE UNSURE

Leave it as a draft and ask. Nothing here is urgent enough to justify guessing in public. The archive is worth something precisely because a reader can believe what it says, and that is rebuilt or spent one label at a time.
